EDUCATION

Bowdoin College

B.A., Computer Science and Economics, Minor in German

Relevant coursework: Operating Systems, Computer Systems, Data Structures & Algorithms, Artificial Intelligence, Cybersecurity, Econometrics

Learning Assistant, CSCI 1101 (Intro to CS), Bowdoin CS Department — Fall 2026

Brunswick, ME

Expected May 2027 · GPA 3.53

EXPERIENCE

Software Engineering Intern, ProgressSoft Corporation

Amman, Jordan · Jun–Aug 2026

- Backend-focused Java internship at a payments software company, supported by a competitive Bowdoin Funded Internship Award.
- Building EventGuard, a Maven-based Java tool that audits payment files: parses and validates sample records, flags duplicate payment IDs, logs audit events, and generates reports of accepted records, rejected records, and rejection reasons.
- Work test-first with JUnit 5 and Mockito, apply SOLID and design patterns, and take part in twice-weekly code reviews, toward the standards ProgressSoft's development teams use.

Web Staff & Data Desk, The Bowdoin Orient

Brunswick, ME · 2024–Present

- Maintain the newspaper's website in HTML, CSS, and JavaScript, ship backend and plugin updates, and analyze traffic and survey data to guide content placement.

Student Advisor, Bowdoin CS Department

Brunswick, ME · 2024–Present

- Evaluate tenure-track faculty candidates through structured interviews and research-talk reviews, and write feedback that informs hiring decisions.

Founder & President, Bowdoin Martial Arts Club

Brunswick, ME · 2024–Present

- Founded Bowdoin's first martial arts club; secured \$800 in funding, recruited 30+ members, and coordinated outside gym partners.

PROJECTS

ClickErase

Python, Gradio, MobileSAM, LaMa, Hugging Face Spaces

- Built and deployed a public AI image-editing app: a user clicks an object, the app generates a segmentation mask with MobileSAM and removes it with LaMa inpainting, behind a Gradio interface for non-technical users. Live demo and github.com/adamzatar/clickerase.

Operating Systems (CSCI 3310)

C / C++

- Built a user-level thread library: ucontext context switching, FIFO scheduling, locks and condition variables under Mesa semantics, and atomicity via interrupt masking, validated with a test suite built to expose buggy implementations.
- Implemented an external virtual-memory pager: demand paging, second-chance (clock) page replacement, software-tracked reference and dirty bits, and disk swap, with work deferral tuned to the cost gap between faults, zero-fills, and disk I/O.

RESEARCH

AI Layoffs and Investor Reactions

Event study

- Tested whether markets react differently to layoffs firms attribute to AI versus ordinary layoffs; hand-coded events, cross-checked SEC filings, and estimated abnormal returns with regression analysis. Advised by Prof. Botsch.

Gibbons Summer Research Fellowship (Funded)

Bowdoin College

- Selected for a competitive funded fellowship; designed and tested financial-literacy curricula for Bowdoin and local schools, combining econometric modeling with experimental design.

SKILLS

Languages: Java, Python, C, C++, Swift, TypeScript/JavaScript, SQL

Backend & Web: Spring Boot, Spring Framework, JPA/Hibernate, Node.js, Express, Next.js, React, Vapor

Systems & Tools: Git, Docker, Linux, REST APIs, JUnit, Maven, CI/CD (GitHub Actions)

Databases: PostgreSQL, MySQL, SQLite, Redis

Spoken Languages: Arabic (native), English (fluent), German (intermediate)

Certifications: AWS Solutions Architect Associate and CompTIA Security+ (both in progress, 2026)
